# Compare and Contrast// You need to **compare** your results and **select** successful one(s) to improve them even more.

Visual evaluation and review

1. Show different results and write what is **positive and negative** for each result through keywords.

2. Compare them all and **tick (√)** the one that you would keep while **cross (X)** those to discard.

3. Ask others to give their opinion on your work.

4. Write a **short conclusion** about why those selected are better than the others. Explain your next intentions.

Questions to ask yourself

> Which options are successful and which ones are not? Why?

> Does that look better if i change...(the colour background / the typeface / the shape / the material...)?

> How to continue improving your results?
