

# Step-by-step// You need to document every step of your experiments and final outcome mainly through photos.

## Documenting an experiment or outcome by steps

1. Take pictures of **every step** of the process as if you were teaching others **how to do what you are doing**.
2. The pictures should clearly indicate the **WHAT** and **HOW** of the practice.
3. Take pictures of the **material needed** as if it was a cooking recipe.
4. Take pictures of **specific details** that are difficult to see at first sight.
5. Take pictures of the **evolution of your work** from A to Z.
6. Take pictures where we see you or your hands working.
