

Comparative analysis// You need to research and analyse materials, images, spaces, products, to later compare them.

1. Collect different images of what you are interested to research on Pinterest (installations, packaging, etc.)
2. Make a moodboard or mindmap with all these images and print it.

3. Evaluate strengths and weaknesses, positive and negative properties, similarities and differences, what could work for your project and what can't. In each case, explain WHY.
